

In the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended): A method for validating a user client system accessing a server system, comprising the steps of:

receiving, in a at the server system, a request for a server resource from a the client system;

determining a an IP network address of the client system;

determining a geographic location corresponding to the network address; and

confirming that the IP network address is associated with an authorized geographic location; and

permitting or denying validating the client system to have access to the server resource in accordance with such confirmation according to the geographic location.

2. Cancelled

3. (Currently Amended): The method of Claim 1, wherein the geographic location is determined from a name-server entry corresponding to the network address of the client system confirming step occurs by searching a database residing on a name-server system accessible by the server system.

4. (Currently Amended): The method of Claim 1, wherein the confirming step includes determining the true geographic location of the client system the geographic location is determined from a global positioning system receiver on the client system.

5. (Original): The method of Claim 1, wherein the server resource includes an automatic-teller application.

6. (Original): The method of Claim 1, wherein the server resource includes an on-line gambling application.

3

7. (Original): The method of Claim 1, further comprising the step of receiving a passcode from the client system.

8.(Currently Amended): A method accessing a remote server, comprising the steps of:
requesting, in a client system, access to a server resource on a server system;
sending a an IP network address of the client system to the server system over the IP network;
5 sending a passcode to the server system; and
selectively receiving access to the server resource over the IP network depending on a validation of the client system by the server system by confirming that the IP network address corresponds to an authorized geographic location the passcode and a geographic location corresponding to the network address.

9. (Original): The method of Claim 8, wherein the server resource is an automatic-teller application.

10. (Original): The method of Claim 8, wherein the server resource is an on-line gambling application.

11. (Currently Amended): A computer program in a computer-readable medium for validating a user client system accessing a server system, comprising:

instructions for receiving, in a at the server system, a request for a server resource from a the client system;

5 instructions for determining a an IP network address of the client system;
instructions for confirming that the IP network address is associated with an authorized geographic location; and determining a geographic location corresponding to the network address; and
instructions for permitting or denying validating the client system to have access to the server resource in accordance with such confirmation according to the geographic location.

12. Canceled

13. (Currently Amended): The computer program product of Claim 11, wherein the geographic location is determined from a name-server entry corresponding to the network address of the client system confirming step occurs by searching a database residing on a name-server system accessible by the server system.

14. (Currently Amended): The computer program product of Claim 11, wherein the confirming step includes determining the true geographic location of the client system the geographic location is determined from a global positioning system receiver on the client system.

15. The computer program product of Claim 11, wherein the server resource includes an automatic-teller application.

16. (Original): The computer program product of Claim 11, wherein the server resource includes an on-line gambling application.

17. (Currently Amended): The computer program product of Claim 11, further comprising instructions for receiving a passcode from the client system over the IP network.

18. (Currently Amended): A computer program in a computer-readable medium, comprising:
instructions for requesting, in a client system, access to a server resource on a server system;

5 instructions for sending a an IP network address of the client system to the server system over the IP network;

instructions for sending a passcode to the server system over the IP network; and
instructions for selectively receiving access to the server resource over the IP network
depending on a validation of the client system by the server system by confirming that the IP network
address corresponds to an authorized geographic location the passcode and a geographic location
10 corresponding to the network address.

5

19. (Original): The computer program product of Claim 18, wherein the server resource is an automatic-teller application.

20. (Original): The computer program product of Claim 18, wherein the server resource is an on-line gambling application.

21. (New): A method for validating a client system comprising the steps of:
receiving, at a server system, a request for a server resource from a client system;
determining a geographically agnostic network address of the client system;
confirming that the geographically agnostic network address is associated with an authorized geographic location; and
validating the client system to have access to the server resource in accordance with such confirmation.

22. (New): The method of Claim 1, wherein the step of validating the client system further includes the step of validating a user accessing the server system through the client system.

23. (New): The method of Claim 8, wherein the step of selectively receiving further includes the step of selectively receiving access to the server resource over the IP network depending on a validation of a user by the server system by confirming that the IP network address corresponds to an authorized geographic location.

24. (New): The computer program of Claim 11, wherein the instructions for validating further include instructions for validating a user accessing the server system through the client system.

25. (New): The computer program of Claim 18, wherein the instructions for selectively receiving further include instructions for selectively receiving access to the server resource over the IP network depending on a validation of a user by the server system by confirming that the IP network address corresponds to an authorized geographic location.
